

## AI-Ready Enterprise Messaging Platform

- Collaborate efficiently through content-centric communication
- Eliminate content fragmentation with automatic version control at all times
- Simplify your tasks with instant AI assistance – summarization, search, Q&A, and more
- Maintain persistent security using advanced encryption, access control, instant messaging wipe, etc.
- Integrate seamlessly with internal and external systems for efficient collaboration

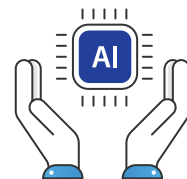

## Fireside Enterprise Messaging Platform for Secure Collaboration

**Content-Centric  
Communication**

**Advanced  
Security**

**AI-Powered  
Workspace**

Traditional messaging platforms are either message-centric or repository-centric, inadvertently creating content silo issues that cause redundant, obsolete, and trivial data. The lack of alignment between communications and their corresponding documents compels users to navigate across multiple platforms to access relevant information. Such limitations undermine organizational productivity, highlighting the need for a solution that unifies chats, content, and collaboration tools into a single, seamless experience.

Fireside addresses these challenges with a content-centric approach to enterprise communication. By automatically linking each document to a dedicated chat, Fireside eliminates content fragmentation, fosters seamless collaboration, and ensures discussions remain focused. Users can engage in real-time edits, enable version control automatically, and leverage integrated web office capabilities – all within a single secure platform.

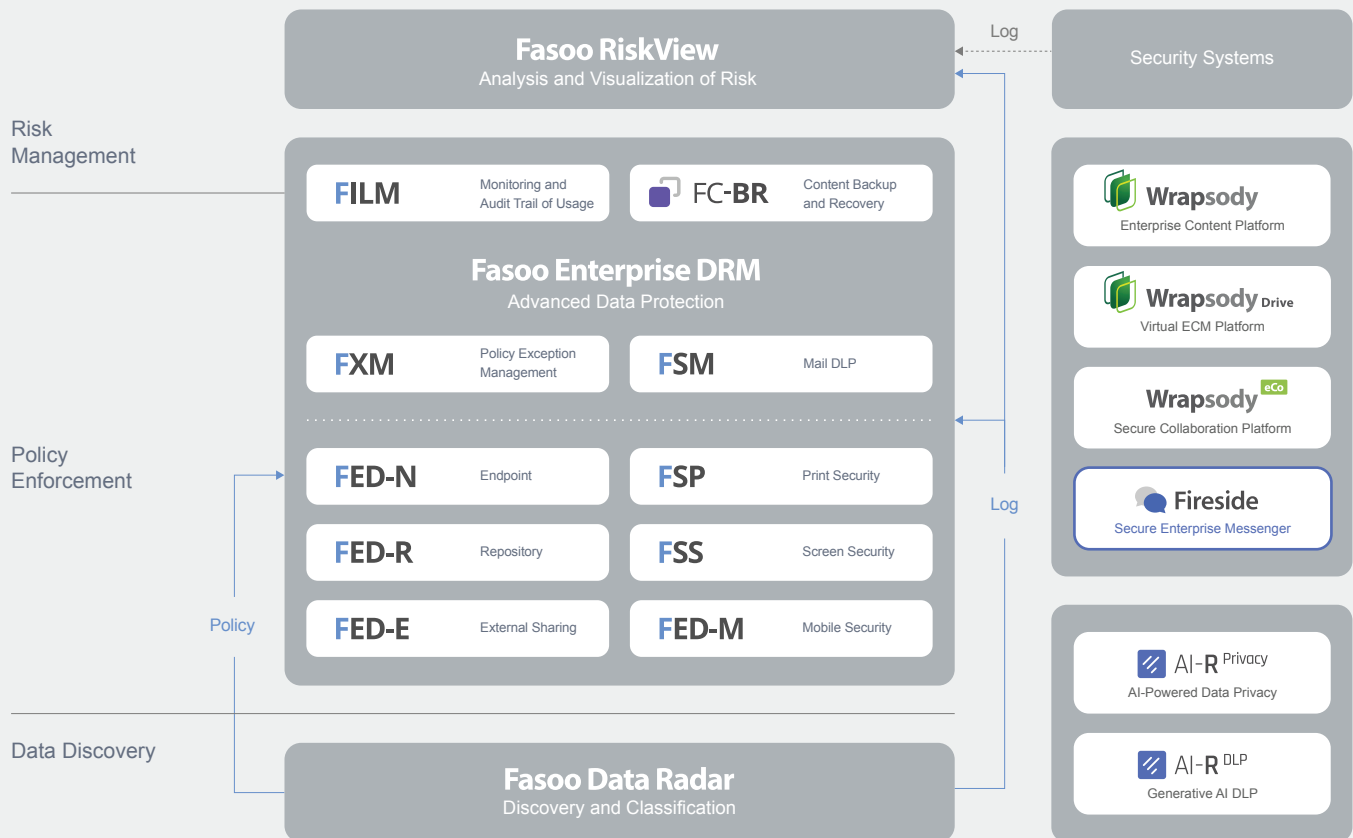

**Fireside**

Fireside redefines enterprise content management and communication by integrating advanced security with AI-powered productivity features. Security features such as end-to-end encryption, policy-driven access controls, and auto-deletion of sensitive content or chat ensure that enterprise communications remain secure and compliant. Fireside also offers AI-powered capabilities, including document summarization, semantic search, Q&A, and more, allowing organizations to achieve greater operational efficiency.

Serving as an all-in-one messaging hub, Fireside integrates with internal systems, web apps, and AI services to deliver a unified and secure environment for collaboration. From encrypted messaging and content-centric chats to AI-assisted insights and seamless content management, Fireside empowers organizations to align their productivity objectives with their security imperatives.

## About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership position in the unstructured data security market by deploying enterprise-wide solutions for more than 2,000 organizations globally, securing more than millions of users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
